$$Kx(1-x)$$

$$K(x-x^2)$$

THURSDAY

37th Week 255-110

12

① Find the value of K

$$f(x) = \begin{cases} Kx(1-x) & 0 \leq x \leq 1 \\ 0 & \text{else where} \end{cases} \text{ is a p.d.f}$$

2) Find CDF of x .

$$\int_{-\infty}^{\infty} f(x) dx = 1$$

$$\int_{-\infty}^0 f(x) dx + \int_0^1 f(x) dx + \int_1^{\infty} f(x) dx = 1$$

$$= 0 + \frac{K}{6} + 0 = 1$$

$$\boxed{K=6}$$

$$\boxed{K=6}$$

$$f(x) > \frac{1}{2}$$

$$P(x > \frac{1}{2}) = \int_{\frac{1}{2}}^{\infty} f(x) dx = \int_{\frac{1}{2}}^1 f(x) dx + \int_1^{\infty} f(x) dx$$

$$= \frac{3-2}{6} = \frac{1}{6}$$

C.D.F. \Rightarrow Cumulative Distribution Function.

'13 SEPTEMBER

13

FRIDAY

37th Week 256-109

SEPTEMBER

2013

S	M	T	W	T	F	S
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30					

② * (11) CDF = $P(x) = P(x \leq x_1) = \int_{-\infty}^{x_1} f(x) dx$

09

10

$$f(x) = \begin{cases} ax, & 0 \leq x \leq 1 \\ a, & 1 \leq x \leq 2 \\ 3a - ax, & 2 \leq x \leq 3 \\ 0, & \text{otherwise} \end{cases} \quad P(x) \geq 0; x < 0$$

12

01

02

(i) Find a,

$$= \frac{ax^2}{2}, \quad 0 \leq x \leq 1$$

03

* (ii) Find CDF of x.

04

$$= \boxed{} \quad 1 \leq x < 2$$

(between 1 & 2)

05

$$= \boxed{} \quad 2 \leq x < 3$$

(between 2 & 3)

06

$$② P(X=0) = 3c^2$$

$$P(X=1) = 4c - 10c^2$$

$$P(X=2) = 5c - 1$$

i) Find 'c'

$$ii) P(0 < X < 2 | X > 0)$$

$$\sum P(X=i) = 1$$

$$3c^2 + 4c - 10c^2 + 5c - 1 = 1$$

$$-7c^2 + 9c - 2 = 0$$

$$7c^2 - 9c + 2 = 0$$

$$7c^2 - 7c - 2c + 2 = 0$$

$$7c(c-1) - 2(c-1) = 0$$

$$(7c-2)(c-1) = 0$$

$$\therefore c = \frac{2}{7} / 1$$

If we put $P(X=0)$, $P(X=1)$, $P(X=2)$ in probability becomes constant > 1 &

-ve, which is not possible

$$\therefore c = \frac{2}{7}$$

$$P(0 < X < 2 | X > 0) = \frac{P(X \geq 1)}{P(X > 0)}$$

$$= \frac{P(X=1)}{P(X=1) + P(X=2)}$$

Find PMF.

Probability Mass Function.

(4) $2P(X=1) = 3P(X=2) = P(X=3) = 5P(X=4) = K$

Find PMF of X .

$$P(X=1) = \frac{K}{2}$$

$$P(X=2) = \frac{K}{3}$$

$$P(X=3) = K$$

$$P(X=4) = \frac{K}{5}$$

$$\therefore \frac{K}{2} + \frac{K}{3} + K + \frac{K}{5} = 1$$

$$= \frac{15K + 10K + 30K + 6K}{30} = 1$$

$$\Rightarrow 61K = 30$$

$$\therefore K = \frac{30}{61}$$

2013						
S	M	T	W	T	F	S
		1	2	3	4	5
6	7	8	9	10	11	12
13	14	15	16	17	18	19
20	21	22	23	24	25	26
27	28	29	30	31		

③ $P(X=j) = \frac{1}{2^j} \quad [j = 1, 2, 3, \dots]$

Verify it is a P.M.F

$$P(X=1) = \frac{1}{2}$$

~~R.H.S.~~

$$L.H.S. = \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \dots + \frac{1}{2^n}$$

$$= \frac{1}{2} \left(1 + \frac{1}{2} + \frac{1}{2^2} + \dots + \frac{1}{2^{n-1}} \right)$$

$$= \frac{1}{2} \left(\frac{1}{1 - \frac{1}{2}} \right) = \frac{1}{2} \times \left(\frac{1}{\frac{1}{2}} \right) = 1 = R.H.S.$$

Hence it is a P.M.F.

⑥ A PDF $[a, 1]$ is given by $\frac{1}{x^2}$ outside the interval 0. Find the value of A.

$$\int_a^1 f(x) dx = 1$$

$$\int_a^1 \frac{1}{x^2} dx = 1$$

'13 SEPTEMBER

18

WEDNESDAY

38th Week 261-104

SEPTEMBER

2013

S	M	T	W	T	F	S
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30					

P.d.f $f(x) = \begin{cases} \frac{2x}{25}, & 0 < x < 5 \\ 0 & \text{else where} \end{cases} \quad |x| < 1.$

$$-1 < x < 1.$$

Find, $P(|x| < 1)$

$$P(-1 < x < 1) = \int_{-1}^1 f(x) dx.$$

(ii) $P(|x-1| < 2)$

$$[-1 \leq x < 3]$$

5B, 5W

→ A bag contain 8 balls

3 balls are drawn randomly, without replacement, if x is a random variable, which takes the value 1, if at least 2 white balls are drawn and the value 0 otherwise.

Find the PMF of x .
